FOR IMMEDIATE RELEASE

Club Car's Electric Precedent Stretch Kit Adds Two Forward-facing Seats

Increases Leg Room, Fosters Interaction and Enhances Comfort

Augusta, Ga. (Aug. 23, 2011) -- Owners of Club Car's electric Precedent golf cars include families who live in gated communities, automotive dealers, apartment complexes and other individuals and business owners. These consumers want to interact with passengers and often want a four-passenger vehicle. Until recently, the only way to transform Club Car's electric Precedent golf car into a four-passenger vehicle was by adding an optional rear-facing seat.

Club Car now offers these owners another choice. Known as the Precedent Stretch Conversion Kit, this dealer-installed option transforms the electric Precedent from a two-passenger vehicle into one with four forward-facing seats. The no-weld kit can be installed in about four hours, increases leg room by 35 inches, and includes an integrated grab bar for rear passengers.

"Unlike the optional rear-facing seat, the Precedent Stretch Conversion Kit allows all four passengers to face forward. This more familiar automotive configuration fosters conversation and increases passenger comfort," says David Selby, Club Car's director of consumer and commercial category.

The frame and other key components are made from rustproof aluminum, and the kit includes all the components needed to convert the vehicle into a four-passenger model, except the actual seats. "Seats are sold separately to allow owners to personalize their vehicles by selecting from our assortment of styles and colors," Selby says.

The kit accommodates an optional 103-inch canopy to protect the car and its occupants from rain and snow. It also accommodates an optional track for users who want to install vinyl enclosures.

The Precedent Stretch Conversion Kit is available at Club Car dealers and distributors. To find a dealer near you, visit www.clubcar.com and click "Dealer Locator."
