

Advance the ride with Lithium Ion and AC Power

Club Car's Lithium Ion vehicles provide best in class performance and safety, delivering an easier and financially rewarding ownership experience. The new AC Lithium Ion battery system will provide golf course operators a seamless, low maintenance energy solution while enjoying faster charge times, less turf compaction, delivering superior energy savings in high cost markets and improved diagnostics enabling better fleet management.

Proven Advantages. Simple Design.

SAFETY AND RELIABILITY

- Total battery protection from top to bottom for improved safety with passing IP67 standards and reliability.
- Standard 1000 watt Dynmaic Brake Resistor provides improved safety and control in downhill conditions by maintaining safe speeds and protecting the health of the battery system.

SMART AND EFFICIENT ENGINEERING

- Visage connectivity integration allows over-the-air software updates with no downtime to course.
- Smart charging system can be programmed to charge during non-peak hours to minimize peak power draw and save money.
- Handheld Bluetooth® diagnostic tool can analyze and configure all electrical subsystems, ensuring quick servicability to keep your fleet running and maximize vehicle uptime.

PERFORMANCE

- The two acceleration profiles of the Lithium Ion vehicles, Economy and Comfort are designed to perform on any course
- 4.7 HP AC motor provides powerful and consistent acceleration for better hill climbing.
- At 699 lbs the Lithium Ion battery solution is 250lbs lighter than flooded lead acid vehicle therefore provides less turf compaction and protects your course.

Improved Fleet Management and Maintenance

How is the Lithium Ion battery zero maintenance? There is no watering of the battery required and no memory to be maintained. With up-to-date remote diagnostic capabilities and network-directed software updates, the Lithium Ion system won't have you guessing when a car needs charged.

Li-Ion batteries charge **2X faster** than Lead-Acid batteries

When it's time to power up, the fast charging times and ability to hold a charge across multiple rounds keep Lithium-Ion powered cars on the course and out of the barn. That's especially critical during peak times.

Up to **50% savings** in electricity costs using Li-Ion batteries

THE GOLFER'S EXPERIENCE

The three-speed profiles—Economy, Comfort, Sport—of the Lithium Ion battery help a car cover all terrains. Golfers can take hills with ease, with the integrated industry leading 235 amp AC motor controller. This power enables golfers to focus on their next shot, not if they'll make it to where their ball is.

SUSTAINABILITY BENEFITS

Club Car vehicles with a Lithium Ion battery have a lightweight frame that causes less turf compaction—reducing grounds maintenance overall. These cars also are more energy efficient and showcase a sustainable commitment from your course.

SAFETY

The Lithium Ion battery with AC power from Club Car was developed for use in the automotive industry. Today, we've built on that foundation to deliver an innovative battery with automotive-grade safety and performance. The dynamic brake resistance module rated up to 1000 watts to aid in downhill speed control with built-in audible alerts for driver safety.

The Li-Ion battery includes an industry-exclusive Vehicle Control Module that allows for remote diagnostics, over-the-air software updates, and scheduled charging to optimize off-peak charging times.

An IP67 steel-enclosed battery pack provides enhanced safety and water protection.
